

# COVID PROTOCOL

WE FOLLOW MOH GUIDELINES  
TO ENSURE YOUR SAFETY

## Patient Scheduling

- We check on the recent travel history and health condition of all patients during appointment booking.
- Patients are scheduled in a manner that allows sufficient time for proper disinfection of operatories and prevents potential cross infection between patients.

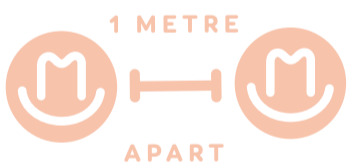

## Upon Patient's Arrival

- Temperature screening is conducted for all patients and accompanying visitors.
- Appropriate hand hygiene with hand rub using at least 60% alcohol-based disinfectant to be practiced by all entering the clinic.
- Number of accompanying persons should be limited to one.

## While Waiting

- In common areas such as waiting and registration areas, all patients and accompanying visitors should keep a distance of one metre apart from one another.
- All visitors are required to wear a mask at all times within the clinic premises.
- The waiting area is equipped with an air filtration unit.

## During Treatment

- Patients will be provided with a one-minute mouth rinse prior to starting any dental procedure. (containing either 1% hydrogen peroxide or 0.2% - 1% povidone or 0.05% - 0.1% cetylpyridinium chloride)
- Effective (high volume) suction are used with assistance.
- Rubber dam used where it is technically feasible.
- Recommended PPE, disinfection and sterilization techniques are employed.
